Student Number	X22511759@student.ncirl.ie
Course	BSHC in Computing
Supervisor	Athanasios Staikopoulos

Month: September

What?

Reflect on what has happened in your project this month?

This month, I finished working on the Watch Your Watts part of the application. The feature is now capable of giving the user a clear understanding of their electricity consumption based on the data collected from the rooms and appliances.

While working on this project, I implemented a major change in the design. I had initially thought of implementing an AI-based model for predictions, but after analysing its complexity and relevance, I decided to discard the idea. I then implemented a new feature called Bills Vault, which enables users to store their electricity bills in PDF format. The PDF files are then secured using hashing and a PIN-based access system to ensure that the billing details are stored in a secure manner.

So What?

Consider what that meant for your project progress. What were your successes? What challenges remain?

The biggest issue this month was realizing that my intended feature (AI model) was not suited for the project, cost and difficulty-wise. In taking out the AI component, I had to go back and change some of my earlier assumptions and documentation, but ultimately it will lead to a cleaner and more feasible solution for my app.

Taking out the AI model and replacing it with Bills Vault eliminated unnecessary complexity and introduced a new feature that is more applicable and relevant to the user. This is also more in line with the project's theme of cybersecurity, as protecting sensitive documents is a real-world application of data protection, not AI.

Now What?

What can you do to address outstanding challenges?

The next area of interest will be the Dashboard area. This will serve as the central gateway for users and will provide information from around the system, such as usage data, costs, and key findings from Watch Your Watts. With all the major backend functionality in place, the dashboard can now concentrate on display and ensuring the information is immediately understandable. This will bring the project closer to completion.
