

Supervision & Reflection Template

Student Name	Liam Connell
Student Number	X22511759@student.ncirl.ie
Course	BSHC in Computing
Supervisor	???

Month: September

What?

Reflect on what has happened in your project this month?

This month, I concentrated on setting up the foundations of my project. I decided to move away from using smart plugs and instead simulate appliance usage through a database which I will create with common household devices. I set up my workflow using **Notion** for documentation and task management, **Figma** for design mock-ups and **PlantUML** for diagrams. I also planned to structure my work in small, agile style “sprints” to make steady progress.

So What?

Consider what that meant for your project progress. What were your successes? What challenges remain?

This gave me clarity on the project’s technical direction. By focusing on simulated data, I can avoid hardware which may be tricky to implement and still demonstrate how energy monitoring can be tracked and displayed. A success this month was refining the project scope so it’s both realistic and achievable. The challenges are still mainly about how to structure the appliance database, how to ensure the data feels realistic to users, and how to design the web app in a way that shows energy consumption.

Now What?	
<u>What can you do to address outstanding challenges?</u>	
To face these challenges, I will focus next month on building the initial database of appliances with the average usage values. I will also start on an early prototype of the Java code and initial app to test how the data can be displayed in a user-friendly way. Breaking this into smaller milestones will help me manage the workload and make sure I have steady progress without the project becoming too hard.
